About Stillbirth Registration Statistics

This dataset includes information about registration of stillbirths documented by Registry Services at the Etobicoke Civic Centre.

Registration of stillbirths is entered into the Registry Services Tracking System (RSTS), from which aggregate statistical information is generated to create the dataset. The dataset resides in an Oracle database in the City's environment.

The dataset is created in support of the Vital Statistics Act, which is Provincial legislation. The dataset also supports the City's operational requirements and business functions.
